

# 2015 Onion Variety Trial Results

## Methods/Procedures

Ten onion varieties were selected to be included in the trial (3 red and 7 yellow). The seed supplier was Johnny's Seeds. The seeds were started indoors in February and grown by Johnson's Garden. The plants were transplanted to the field on June 2, 2015 in a completely randomized block design; 24 plants of each variety were planted. Drip irrigation was used. The onions were harvested on September 19<sup>th</sup>. The smallest, average size and largest size of each variety was selected and weighed.

## Results

Alisa Craig was the top performing variety; the onions were large and uniform. The best performing red onion was Redwing, which was very uniform. The varieties Pumba, Bridger and Cabernet performed very poorly, and based upon these results, they would not be recommended for planting.
